

Secure Vote by Mail

THE PROBLEM: LACK OF SECURITY

Mail-in voting is a breeding ground for ballot harvesting and fraud.

Individuals **can return an unlimited amount of ballots and pre-filled applications** make the problem worse.

Absentee ballots have **fewer ID requirements** than in-person voting, and often require little to no ID or in-person screening.

Requiring canvassing committees to have a unanimous vote makes it **more difficult to reject fraudulent ballots**.

THE SOLUTION: SECURE THE PROCESS, SECURE THE VOTE

Commonsense measures to secure the mail-in voting process can protect voters identification and the vote of some of the most vulnerable—the elderly.

Requiring absentee ballots to have witnesses

Implementing ID requirements

Prohibiting pre-filled applications

Making canvassing committees majority rule

Secure Vote by Mail

IT'S HAPPENING: ABSENTEE BALLOT FRAUD

In Eastern Kentucky, **votes were purchased** using sums of \$5, \$10, or even as high as \$800.

In West Memphis, Arkansas, a Democrat running for the state legislature paid **absentee voters** with alcohol, cash, and even dinner.

In West Virginia, a county Sheriff went **door-to-door** telling voters who to cast a ballot for, and even assisted some.

IT'S POPULAR

Voters support requiring registration applications to be received at least 30 days before Election Day.

Voters support requiring your state to verify voter registration rolls at least twice per year.
